

***HALF
MARATHON
BEGINNER
TRAINING
GUIDE***

GETTING STARTED

This program is designed for someone who is active and runs 1-2 times per week and is looking from some clear structure to work towards running their first half marathon.

DON'T WORRY ABOUT

YOUR PACE, GET OUT

THERE AND ENJOY YOUR

RUNNING!

Want to get a head start?

Great! The earlier you can get into your training the better, but remember this program is 16 weeks long, and we want to get you to race day feeling good.

Starting a little late?

Don't stress at all. You can jump on board at any stage. Just be careful not to ramp everything up too quickly. We want to make sure you get to the start line injury-free.

Need to move things around?

Feel free to move the weekly schedule around to fit with what works best for you. Just make sure to have at least two rest days per week.

YOUR COACH

MIKAYLA BEAVIS

STRENGTH AND CONDITIONING COACH

At RADCentre, we aim to empower athletes of all ages and abilities to improve their performance and wellbeing.

RADcentre is a high-performance company based in Ballarat and servicing Western Victoria through our key services of strength and conditioning, physiotherapy, injury rehabilitation and sports dietetics.

We are super-excited to be on board as the training program provider for the Ballarat Marathon road running festival, providing a guide on how to best prepare for each distance.

We have been fortunate enough to work with some of Ballarat's best runners, supporting them in all types of events from international marathons and ultra-running mountain challenges to recording personal bests in local ParkRuns.

Our team is here to assist you across your whole training journey. In conjunction with this program, there will be plenty of educational resources provided in the lead-up to the Ballarat Marathon. We cant wait to see you perform on the day.

Any questions? You can contact us at:

KEY

TERMS

Within the provided training programs, there are several key terms and concepts that have been utilised in order to categorise training intensity. Several of these words and ideas might be foreign to you, but do not fear them. Simply read through this training glossary and you'll be up to speed in no time.

KEY TERM	DEFINITION
Critical Velocity (CV)	This is a heavily-used training variable within this program. It is the fastest running pace you can maintain for 30 minutes.
Cross Training	As the program highlights, this is a form of cardiovascular training we are wanting you to perform that does not place loading on your legs. You can choose any form of cardiovascular training that fits this brief, such as cycling, swimming and rowing.
Easy pace	This is a cornerstone in each training program. Easy-paced running should be considered a pace in which you can maintain a conversation if you were running with a buddy.
Fartlek	Fartlek sessions are a mixture of faster- and slower-paced running, designed to increase your speed capacity.
Float	This pace is consciously faster than your easy-paced jogging. Float periods are designed to aid you to actively recover at a faster pace, allowing you to perform your total run at a faster speed.
Interval sessions	These sessions include multiple efforts at different speeds. The objective is for consistency across your repetitions. Ideally, the pace at which you perform your repetitions is within 5 to 10 seconds of one another. Please do not 'empty yourself' in repetition one and then fade as the repetitions go on.

Long run	This is the most important run of your training program. This run is designed to develop your capability to cover the distance on race day. Therefore, it will slowly increase your ability to run further.
'Mona' Fartlek	A favourite session of Ballarat legend and distance running icon Steve Moneghetti.
Moose Fartlek	Named after another legendary runner from Ballarat, Julian 'Moose' Spence, who these days resides and trains on the Surf Coast.
Off	These days are programmed in order to regenerate your body for the increased training load it is facing. Please respect these days and do not perform any cardiovascular training on these days so you are fresh for your other days.
Shake Run	This is a very easy pace run performed leading up to race day. The intension is not for additional fitness benefits. Rather, it's about keeping your body moving! Please keep this one nice and easy and run completely to feel!
Strides	Strides have a very similar targeted response as surges, but they are performed differently. Following your run, you will set these up as 'run through efforts' and either walk or slowly jog the rest period. These are performed slightly faster than surges.
Surges	Surges are programmed in order to develop your mechanical ability to move at a faster pace. They are to be performed by increasing your speed for 20 seconds and then reducing it back to your normal jogging pace for 40s.
Target pace	Although you may not have completed your preferred distance before, as your training progresses you are likely to settle on a rough time goal for completing your race (for example, four hours for the marathon). You will then be able to work out how fast you need to complete each kilometre to achieve this goal. At this point, it is vital that we begin specialising your training to target this goal. That's why you see mentions of half marathon pace and marathon pace in the plans for the longer races.
Tempo	Tempo runs are noticeably faster than your easy-paced runs and are designed to increase your capability to run faster for longer and endure that elevated pace. You should be able to talk, but your conversation should be interrupted with the need to breathe mid-sentence.
Threshold	Your threshold is the point at which you are running at a speed that causes lactic acid to start building up in your bloodstream, causing you to need to slow down. Threshold runs are designed to increase the threshold at which lactate begins to build up. Threshold runs are a gear change up from tempo runs and can be recognised with the phrase 'comfortably hard'. You should feel like you are in control the entire time, but not have a desire to have a conversation while running at this pace.
Track sessions	Aim to complete these sessions at an athletics track. A football oval is your next-best location.

8TH JAN - 14TH JAN

WEEK

ONE

	ACTIVITY	DESCRIPTION	KM	EFFORT
MONDAY	OFF			
TUESDAY	EASY PACE RUN		6KM	6/10
WEDNESDAY	INTRO TO CRITICAL VELOCITY	<ul style="list-style-type: none">• 2KM EASY PACE WARM-UP• 6 SETS OF 1MIN RUN + 1MIN WALK• EASY PACE RUN REMAINING DISTANCE	8KM	EP = 6/10 CV = 8/10
